

### **W0343**

**What Does George Lucas Know About Crystallography?** Patrick J. Carroll, Dept. of Chemistry, Univ. of Pennsylvania, Philadelphia, PA, USA.

A collection of interesting structures from the past couple years done in the X-ray Facility in the Department of Chemistry at the University of Pennsylvania is presented. Included are large structures, twinned structures, structures with  $Z' \gg 1$ , structures with disorder, structures with large numbers of solvent molecules, several still “unsolved” structures, and a few structures that are difficult to classify.
